**November 4th 2009 for immediate release.
High Lifts at SLP's Lowestoft Yard Tops Out Module**

Work on the 180 person accommodation module and the PFS Module (Power from Shore) for BP Norge AS and partners continues at SLP's Lowestoft Yard, completion is due May 2010.

Once complete the LQ module will be one of the most luxurious in the North Sea, providing single cabin accommodation for all 180 men along with various recreation facilities including a gym, sauna and music room. The module also boasts an impressive five storey glass fronted atrium.

Recent significant stages in the project have included the 'high lift' of the helicopter hangar and helideck onto the roof of the module. These intricate lifts require careful planning and preparation to achieve a safe and technically sound operation on site.

The Valhall Field is located offshore in Norwegian Sector of the North Sea. The field first started production in 1982 and is operated by BP in partnership with Hess, Shell & Total. Current production from Valhall is circa 70,000 bbls for 2009. The original design life of the field was for 25 years and the redevelopment is to provide new facilities for the next 40 years through a Production & Hotel Platform (PH).
